

## SHOU SUGI BAN

# KONA (not charred)

## SHOU SUGI BAN – FEATURING WESTERN RED CEDAR WOOD

Kona by Reclaimed DesignWorks features western red cedar that is sustainably harvested in the pacific northwest and intended to provide a high performing, natural material with a weathered aesthetic. Kona can be used for interior or exterior wall cladding and is available in a select tight knot grade.

Combining western red cedar's impressive exterior reputation and RDW's design process, Kona is durable, dimensionally stable, resistant to rot and insects, and has a grey, weathered look. For exterior applications RDW recommends sealing the face and back.

### DISTINCTIVE ATTRIBUTES

RDW's weathered designs offer a consistent aesthetic from the moment of installation. As a natural building material, wood cladding weathers inconsistently and can be unpredictable. Kona provides an exterior material that will have minimal aesthetic variation throughout its installation

#### KONA SPECS:

Shou Sugi Ban flooring is created using a Japanese wood burning technique to yield a unique texture and appearance.

BOARD WIDTHS	5"
BOARD LENGTH	6'-16' random lengths
PLANK THICKNESS	Solid: 3/4"
FINISH OPTIONS	- stained & sealed face & back – Exteriors - stained & sealed face only – Interiors

NOTE: Each of our products posses unique characteristics and beauty. While our samples provide a close representation of each specie, they are for photo reference only and cannot exactly match the end product.
